

CHECKLIST FOR STAND BUILDERS

Show your professionalism. • Do not take unnecessary risks.
Always observe safety rules and regulations !

This list is limited and not exhaustive !
Legal prescriptions always prevail.

WEAR SAFETY SHOES!

Avoid bruises and injuries of your feet both during charging and discharging and on the construction site. Always wear safety shoes when you are working.

WEAR SAFETY GAUNTLETS !

Avoid bruises and injuries when moving, nailing, screwing or sawing panels and when cutting carpet. Make sure your hands do not get jammed when manipulating heavy objects or large parts.

WEAR PROTECTIVE GOGGLES!

Avoid eye injuries during risky operations such as working grinding machines, operating a pneumatic stapler or an air-brush. Think of your colleagues' safety as well.

LIFT WEIGHTS CORRECTLY !

Do not charge your back unnecessarily when lifting weights. Use an adequate lifting technique, thus avoiding strained muscles and muscular pain. Lifting weights correctly will make you feel fitter.

AVOID RISKS AT GREAT HEIGHTS!

Do not use ladders when working at greater heights, but use an approved scaffold instead. Always follow the instructions and regulations when mounting a scaffold.

USE A SAFETY HARNESS !

When working at greater heights, a safety harness will protect you from falling. Especially when you are working on trusses or profiles, adequate body protection is indispensable.

WEAR A SAFETY HAT!

Protect your head from falling objects and materials. Wear an approved safety hat as soon as you enter the site. Remember a safety hat enhances your visibility to others on the site.

USE CERTIFIED MATERIALS !

Always use certified materials and tools for floor covering, canvas, wiring, electricity, lighting, switchboards, drapes, paint, plastics, panels.

REMOVE WASTE !

Do not let waste drag around on the booth or in the aisles, but bring it to the indicated waste deposits. An orderly construction site avoids pile-ups and allows you to work efficiently and safely.

STACK CARGO CORRECTLY !

Make sure all freight is stacked and lashed down properly, even when it is for a shorter distance. Rearrange partial freight in order to have a well balanced stow.

DO NOT WALK UNDER CHARGES !

Observe the safety perimeter around suspended charges and do not walk under them. Warn your colleagues and all other people on the site when you start hoisting.

KEEP AWAY FROM TAILBOARDS!

Keep away from hydraulic tailboards of trucks. When parking a truck, leave enough free space at the back to keep the tailboard easily accessible during charging and discharging.

DO NOT RIDE MANUAL PALLET TRUCKS !

A manual pallet truck is designed to transport goods, not people. Do not stand on pallet trucks and do not allow other people to do so.

DO NOT STAND ON FORKLIFTS!

Forklifts are not suited for lifting people. Only use a forklift for the jobs it was designed for: moving goods around and getting them on and off trucks.
